|---|--|---|
|  | <p>Single Tooth Replacement with Dental Implants Replacing a single lost tooth with an implant that provides a post to receive a cemented crown, provide a predictable, natural and cost effective method of replacing the tooth without requiring preparation and crowning of the adjacent teeth. Depending on the density of the bone, a temporary crown can be placed immediately</p> | <p>Price Range \$2,000 - \$3,000</p> |
|  | <p>Partially Edentulous Cemented Bridge on Implants Implants, strategically placed based on available bone and location of missing teeth, provide a predictable, natural and cost effective method of replacing missing teeth in jaws with remaining healthy dentition. Unilateral bridges are usually cemented but can also be screw-retained.</p> | <p>Price Range \$6,000</p> |
|  | <p>Lower Overdenture Retained by 2-3 implants For totally edentulous lower jaws, 2-4 implants provide retention of a denture using balls or Locator™ attachments. The denture rests on the soft tissue, with the implants providing lateral stability as well as retention. This restoration can subsequently be upgraded to total implant supported with more implants being placed in the future.</p> | <p>Price Range \$2,000 - \$5,000</p> |
|  | <p>Full Arch Bar Overdenture on 4-6 implants For totally edentulous jaws, using a minimum of 4 implants in either the lower jaw or upper jaw, implants provide support and retention of a denture using balls, clips other retentive means. By splinting 4-6 implants, placed in the anterior of each jaw, the bar can extend back of the implants to provide a totally implant supported restoration.</p> | <p>Price Range \$10,000 - \$13,000</p> |
|  | <p>Full Arch Screw-in Restoration on 4-8 implants For totally edentulous jaws, using a minimum of 5 implants in the lower jaw and 6 implants in the upper jaw, implants provide support for a cemented fixed bridge. In the upper jaw, bone grafting to raise the floor of the maxillary sinus or angulation of the most posterior implants may be required.</p> | <p>Price Range \$12,000 - \$17,000</p> |
|  | <p>Full Arch Cemented Restoration on 4-8 implants For totally edentulous jaws, using a minimum of 5 implants in the lower jaw and 6 implants in the upper jaw, implants provide support for a cemented fixed bridge. In the upper jaw, bone grafting to raise the floor of the maxillary sinus or angulation of the most posterior implants may be required.</p> | <p>Price Range \$15,000 - \$20,000</p> |
